

Cloud Migrations

Webex & MS Teams

Scope

Power every part of collaboration with Webex and Microsoft Teams Meetings via single platform for calling, meetings, messaging, polling, webinars, events, video, recording and more.

Support CVI (Cisco Video Integration) with VIMT (Video Integration Microsoft Teams) allowing users a seamless experience to join Microsoft Teams meetings from any Cisco or Microsoft capable device registered to either the cloud or on-premises.

Give everyone a seat at the table, no matter how or where they work by equipping your employees with the most powerful tools for Video, Voice and Meetings interactions.

Benefits/Outcomes

- Join and Schedule meetings from any device with a single tap. Go from desktop to Mobile to car with a Mobile QR code feature and CarPlay or any Meeting Room integration.
- Support Webex Edge Connect and Microsoft Directing Routing Cloud to integrate On prem or 3rd party collaboration applications for meetings, videoconferencing and recording.
- Configuration is performed via Webex Control Hub and Microsoft O365 Admin to simplify management of all users and devices from a single pane of glass.
- Employees not fluent in English, No problem with Real-time Voice Translations and Gesture Recognition, AI Tools can translate up to 100+ languages and Meeting input reactions can be performed with just your fingers and your camera for accessibility issues.
- Consuming tasks whilst calling, note taking, actioning items using the best of breed Webex and Microsoft AI Assistant tools.
- Leverage native integrations and advanced video interoperability to use the platforms of your choice, with seamless join to Webex, Microsoft Teams, Google Meet, or Zoom.
- Design your workspaces with a full range of easily deployable hardware devices to suit your organizations needs.

Deliverables

- Initiate Kick-off meeting with customer to understand the collaboration strategy, use cases and expectations of the platforms they are looking to move over to Microsoft or Webex Cloud.
- Perform an assessment of the current platforms to identify any existing dependencies so we can uncover any incompatibilities that may hold back the journey to the cloud.
- Configure any on prem endpoints, client devices or services to support Webex and O365 cloud registration.

Assumptions

- Customer will provide Tesrex consultants with unmetered/unrestricted administrative access to Microsoft Admin Centre and Webex Cloud Platforms.
- Document clearly what existing features need to be retained or newly adopted into the Cloud e.g. Meeting Policies, Joining and Feature Restrictions.
- Decide the external connectivity strategy being used i.e. Operator Connect using the existing Service Provider? Or Direct Routing integrating your existing on prem telephony infrastructure with the Cloud?
- Plan ahead for decommissioning any legacy analog and unsupported VoIP or Video devices.
- 3rd Party applications integrating with Webex's and Microsoft's Cloud will need to be thoroughly checked for compatibility and replaced if necessary.
- All work will be delivered remotely, unless there is an absolute necessity which may jeopardize the success of the project.
- Each platform will be configured AS-IS; this means no change in the existing configuration will be made unless agreed to further advance the projects intended

▶ About Tesrex

We're a team of Cisco specialised IT consultants and solution providers based in London. Our goal is to accelerate the adoption of next-generation technologies in the organisations we work with. Everything we do at Tesrex comes down to our ethos; Design. Deliver. Nurture. This core ethos shapes every experience our clients have while working with us.

As a company, our roots first sprouted in San Francisco, USA before we started working in the UK in 2016. Since then, we have built a highly-skilled team with diverse knowledge so we can efficiently solve any challenge a customer presents to us and exceed expectations.
